07 RECOMMENDATIONS / RECOMENDACIONES

WAREHOUSING
In order to guarantee the characteristics of the finish the product must be kept in its original packaging until the time of fixing. If the product is likely to be stored for a long period of time it should be suitably covered.

TILE FIXING
To ensure the products adhere correctly to the surface, it is essential to use specific adhesive and grouting material. It is smust also be suitable for the environment they will have to withstand. Fitting with traditional mortars does not ensure good adhesion. Due to the nature of the material there may be dimensional variations between pieces. Therefore, all types of joints must be planned and carried out correctly, structural, perimeter, expension and installation joints. Fitting tiles without joints in not advisable from any technical point of view as this may lead to various problems. For an optimal result we advise to use 2 mm (0.08°) grout.

MAINTENANCE AND CLEANING
Once the materials have been fitted, it is advisable to remove any remaining adhesive and grouting material by using a commercial descaling product designed especially, diluted with water. The descaling product must not remain in contact with the surface to be cleaned for more than 5 minutes. As a general guideline, powder dertergents should not be used, not wire wool or abrasive materials. Generally a sponge will be sufficient with warm water and liquid neutral soap. Then rinse with plenty of clean water.

WARNING!

WARNING!

This collection reproduces traditional hand made tiles, this is the reason why there are slight dimentional differences between pieces (variable lengths and widths), which are part of the intended aesthetic. It is advised to adjust each one of the pieces in the process of installation due to the dimentional differences, instead of using spacers. As a resulting the process of the proc

ALMACENAMIENTO

ALMACENAMIENTO
Para garantizar las características de su acabado, el
producto debe mantenerse en su embalaje original hasta el
momento de la colocación. Si el producto va a permanecer
almacenado durante un largo periodo es conveniente
hacerlo bajo cubierta.

COLOCACIÓN

COLOACIÓN
Para grantizar una buena adhesión al soporte es necesaria la utilización de materiales de agarre y de rejuntado adecuados al ambiente al que veyan e setar sometidos. La colocación con morteros tradicionales no garantiza una buena adhesión.
Debido a la naturaleza del material pueden existir diferencias dimensionales entre piezas. Por allo deberán planificarse y ejecutarse correctamente todo tipo de juntas: estructurales, perimetrales, de dilatación y de colocación. La colocación sin juntas es desaconsejable desde cualquier punto de vista técnico, pudiendo ser el origen de diversas pastologías. Para un resultado óptimo recomendamos usar 2 mm de junta.

MANTENIMIENTO Y LIMPIEZA

¡ATENCIÓN!

Esta colección reproduce azulejos tradicionales hechos a mano, por esta razón existen ligeras diferencias dimensionales entre piezas (largos y anchos variables), que forman patre de la estética final que se busa. Es recomendable la instalación ajustando a mano cada una de las piezas debido a las diferencias dimensionales en vez de utilizar separadores. Estas diferencias son las que aportan su carácter, aspecto artesano y un resultado final de alto valor estético.
